

Greenhouse effect

Interactive display that shows the greenhouse effect and carbon dioxide emissions. A strong spot light shines over the globe that has a perspex dome mounted over it. The perspex dome is similar to the function of carbon dioxide emissions around the world. When the dome is lifted Backwards, the temperature around the globe is suppressed by the fact that the lamp illuminates the same heat. That is, the dome (carbon dioxide) shuts in the long-wave radiation around the globe and contributes to global warming. A sensitive and fast thermometer shows the increase/decreas of 1-2 degrees shown on a LED display.

Size (W & H) ca: 1100mm x 2500mm

Material: Aluminium & Steel

Surface treatment: Water resistant 2 component paint

Power requirements: 230V
