

3D Tic-Tac

An experiment station that asks the visitors to challenge each other in a contest to be the first get 4 lights lights to shine in a row. You can win by lighting them in the same color in all directions: horizontally, vertically or diagonally through the cube. They are lit by touch. The experiment also has many interesting automatic pause functions, so it gives the room and the exhibition light in a playful and exciting way. A smart and high-tech lighting set up fthats brings character to the exhibition and a challenge for the visitors in mathematics, form and technology.
